

## Corbilina Sun Catchers – Spread the Light!

### Materials:

- Tissue paper in various colors
- Scissors
- White Glue or liquid starch
- Wax Paper
- Double Sided tape

1. Cut various colors of tissue paper into small pieces.
2. Lay a sheet of wax paper on a flat surface.
3. Brush on some liquid starch or diluted white glue (2 parts glue to 1 part water) onto a portion of the wax paper. Spread the starch or glue into a thin layer.
4. Place a few overlapping pieces of tissue onto the area with glue or liquid starch. Brush on some more glue or starch over the pieces, smoothing them around the edges as you go.
5. Continue adding tissue paper pieces until you've made a collage that almost covers the entire wax paper or until you've got a big enough collage to make the intended number of sun catchers. Allow the collage to dry completely.
6. If you want sun catchers that are more see-through, you can carefully peel off the tissue collage from the wax paper once completely dry.
7. Leaving the wax paper on is perfectly okay—the sun catchers will still catch some light, though not as much as wax paper-free ones.
8. Cut shapes out of the tissue paper collage. You can cut directly or pre-draw the shapes onto the tissue prior to cutting.  
Shape ideas are Hearts, Peace Signs, Butterflies, and Fairies
9. Use double-sided tape to stick the sun catchers onto glass windows or doors.
